County

ALCOHOL ADDICTION TREATMENT PLAN

MONTH 1: INPATIENT DETOXIFICATION & CLINICAL STABILIZATION

- **Intake Diagnostics & CIWA Assessment:** Comprehensive screening using the Clinical Institute Withdrawal Assessment (CIWA) to grade severity of alcohol withdrawal. Baseline blood panels, including liver function tests (LFTs), are executed immediately.
- **Psychiatrist Evaluation:** Initial comprehensive clinical psychiatric assessment to identify and address underlying co-occurring mental disorders, focusing on major depressive disorders, anxiety complexes, and trauma.
- **Medical Detoxification & Seizure Prophylaxis:** A structured inpatient medical detoxification phase, incorporating fluid stabilization and critical nutritional replenishment (high-dose Thiamine/Vitamin B1 to explicitly prevent Wernicke-Korsakoff syndrome).
- **Withdrawal & Medication Management:** Aggressive symptom-triggered protocol administration using appropriate pharmacological agents to mitigate physiological alcohol withdrawal shakes, tremors, or autonomic instability.

MONTH 2: INTENSIVE REHABILITATION & CORE THERAPY

- **Evidence-Based Psychotherapy:** Individualized clinical therapy tracks utilizing Cognitive Behavioral Therapy (CBT) to alter drinking behavioral loops, Motivational Enhancement Therapy (MET), and deep Cognitive Restructuring.
- **Targeted Psychoeducation:** Clinical educational workshops tracking neurobiological alcohol damage, coping styles for physical cravings, and rebuilding emotional baseline control.
- **Therapeutic Modalities & Group Integration:** Daily clinical group process therapy, specialized individual counseling paths, and systemic family restoration loops.
- **Life Skills & Recovery Coaching:** Systematic introduction to the 12 Steps of Recovery framework, combined with interactive healthy coping and life skills tracks designed to build emotional resilience and self-worth.
- **Ongoing Psychiatric Review:** Regular evaluations to monitor emotional progress, stabilization of post-acute withdrawal syndrome (PAWS), and pharmacological maintenance adjustments.

MONTH 3: ADVANCED RELAPSE PREVENTION & TRANSITION

- **Relapse Prevention Training (RPT):** Formulating highly customized personal safety maps, mapping situational social triggers, and training in high-risk refusal strategies.
- **Intense Systemic Family Therapy:** Advanced sessions dedicated to breaking enablement cycles, defining explicit boundaries, and building an accountable home environment.
- **Discharge Matrix & Aftercare Planning:** Final coordination and structuring of outpatient continuation paths, medical cross-referrals, and connection with local peer sobriety networks.
- **Final Psychiatrist Clearance:** Concluding psychiatric profiling to certify clinical stability, transition safety readiness, and issue discharge sign-offs.
