County

NICOTINE ADDICTION TREATMENT PLAN

MONTH 1: ASSESSMENT, WITHDRAWAL MANAGEMENT & CESSATION INITIATION

- **Intake & Baseline Profiling:** Comprehensive screening utilizing the Fagerström Test for Nicotine Dependence (FTND) to determine biological dependence severity. Baseline vitals and respiratory health markers are logged.
- **Psychiatrist Evaluation:** Comprehensive psychiatric review to assess for common co-occurring mental conditions, focusing on generalized anxiety disorders, clinical depression, and secondary substance dependencies.
- **Nicotine Replacement & Pharmacotherapy:** Initiation of an individualized medical tapering strategy via Nicotine Replacement Therapy (NRT patches, gums, or lozenges) or non-nicotine prescription pharmacotherapy to suppress neurochemical receptor cravings.
- **Acute Withdrawal Management:** Continuous clinical observation and non-pharmacological interventions to actively manage severe irritability, intense physiological cravings, concentration deficits, and sleep inversion during the critical first 14 days of cessation.

MONTH 2: BEHAVIORAL RECONSTRUCTION & CORE COUNSELING

- **Evidence-Based Psychotherapy:** Structured therapeutic tracks utilizing Cognitive Behavioral Therapy (CBT) to decouple behavioral smoking/vaping routines from stress responses, alongside active Motivational Interviewing (MI).
- **Targeted Psychoeducation:** Interactive clinical workshops evaluating dopamine pathway hijacking, cellular and vascular impacts of chronic nicotine use, and neurobiological coping timelines.
- **Multilayered Counseling Ecosystem:** Delivery of intensive individual counseling paths, family supportive dynamics, and structured group therapy environments centered on shared accountability.
- **Life Skills & Habit Replacement:** Practical developmental sessions focused on deep breathing mechanics, progressive muscle relaxation, stress mapping, and implementing healthy physical replacement routines.
- **Recovery Coaching:** Integration of behavioral frameworks and milestone tracking to overcome institutionalized self-defeating loops and actively restore strong personal self-worth.
- **Psychiatric Status Review:** Regular evaluations to monitor emotional baseline adaptations, track Post-Cessation Weight Management parameters, and adjust NRT step-down protocols.

MONTH 3: ADVANCED RELAPSE PREVENTION & LONG-TERM MAINTENANCE

- **Relapse Prevention Training (RPT):** Developing highly customized environmental safety plans. Mapping specific environmental, social, or emotional cues (e.g., social gatherings, high-stress triggers) and training in prompt refusal techniques.
- **Systemic Family Therapy:** Advanced home stabilization loops to eliminate secondary exposure paths, build absolute household boundary rules, and secure an encouraging support environment.
- **Discharge Matrix & Aftercare Planning:** Structuring long-term maintenance tracks, coordinating final step-downs of pharmacological supports, and setting up ongoing outpatient telephone check-ins.
- **Final Psychiatrist Clearance:** Concluding assessment to confirm complete psychological stabilization, lifestyle transition readiness, and issue formal discharge sign-offs.
