Location: Kisian junction, Kisian-Bondo Usenge Rd, Kisumu
County

SCHIZOPHRENIA CLINICAL TREATMENT PLAN

MONTH 1: ACUTE STABILIZATION & DIAGNOSTIC PROFILING

- **Comprehensive Psychiatric Evaluation:** In-depth clinical staging mapping active positive symptoms (hallucinations, delusions, disorganized thinking) and negative symptoms (avolition, flat affect) utilizing standardized PANSS rating scales.
- **Medical Assessment & Baseline Diagnostics:** Full metabolic screening, neurological examinations, and baseline laboratory panels to rule out organic toxicities, medical mimics, or substance-induced secondary psychosis.
- **Pharmacological Optimization:** Initiation and careful adjustment of targeted atypical antipsychotic regimens to reduce acute psychosis, paired with close monitoring for metabolic or extrapyramidal side effects (EPS).
- **Crisis De-escalation & Milieu Safety:** Providing a structured, low-stimulus inpatient therapeutic environment to re-establish sensory baseline control, orientation, and behavioral safety.

MONTH 2: RECOVERY INTEGRATION & REALITY TESTING

- **Specialized Psychotherapy for Psychosis:** Introduction of Cognitive Behavioral Therapy for Psychosis (CBTp) to assist the client in developing cognitive reframing techniques and reality testing for residual hallucinations/delusions.
- **Illness Management and Recovery (IMR):** Psychoeducational workshops focused on building internal tracking models for early warning signs of decompensation, symptom reduction skills, and medication adherence strategies.
- **Social Skills & Cognitive Remediation:** Structured behavioral training to enhance social perception, communication dynamics, and executive functioning deficits associated with neurocognitive declines.
- **Core Therapeutic Modalities:** Consistent validation through individual counseling sessions, peer group therapy interactions, and targeted supportive recovery coaching tracks.
- **Ongoing Psychiatric Re-evaluation:** Routine reviews to optimize therapeutic serum drug levels, manage negative symptom response profiles, and track cognitive engagement parameters.

MONTH 3: COMMUNITY RE-ENTRY & SYSTEMIC SUPPORT

- **Behavioral Relapse Prevention Planning:** Co-creating an actionable wellness recovery action plan (WRAP), defining personal stress indicators, environmental triggers, and emergency clinical intervention workflows.
- **Intensive Family Psychoeducation & Support:** Equipping immediate family structures with stress-reduction strategies, reducing high Expressed Emotion (EE) environments, and creating clear household baseline expectations.
- **Independent Living & Functional Rehabilitation:** Occupational life skills development emphasizing daily task scheduling, budget management, and structural execution of simple routine tracking models.
- **Transitional Aftercare Matrix:** Formulating discharge outpatient pathways, ensuring direct handoffs to community mental health networks, case management support, and scheduling routine post-discharge appointments.
